Project Toolkit documentation

Main documentation

- Tbd.

SonarQube

- [Tryout SonarQube](#)
- [Server setup](#)
- [Docker image](#)
- [C++ support](#)

Additional material

- Tbd

TODO

- `sh run nameOfConfiguration` instead of `sh Run/Some/Path/script.sh`
- The Project Toolkit includes mechanism:

```
IMPORT "Utils/VSCode/Something" # Where Something corresponds to `Soemthing` or
`Soemthing.sh`
```

```
USE "Utils/VSCode/Something" # Where Something corresponds to `Soemthing` or
`Soemthing.sh`
```

Where `IMPORT` will just include the script (reference its path), and `USE` will do the same and `source` it.

- The `IMPORT` and `USE` will be exported and avaialbe through the Project Toolkit installation procedure.
